Professional Summary

First-year B.Tech Information Technology student with strong foundational knowledge in Python, Flutter, FastAPI, and IoT hardware development. Experienced in building real, working applications spanning mobile apps, embedded systems, and cloud-connected dashboards through personal and hackathon projects. Skilled in REST API integration, SQLite-backed backends, and applied AI features using the Gemini API. Quick learner with hands-on project experience and a strong interest in full-stack development, IoT, and AI-driven applications.

Education

[Your College / University Name] 2025 – Present

B.Tech in Information Technology — 1st Year

Technical Skills

Programming Languages: Python, Dart, C/C++, HTML, CSS, JavaScript

Mobile & Backend: Flutter, FastAPI, REST API, SQLite

IoT & Hardware: ESP32-C3, PlatformIO, ESPHome, MQTT

AI / ML: Gemini API, Prompt Engineering

Tools & Deployment: Git, GitHub, Vercel, VS Code, Linux

Projects

Melodia – Personal Music Streaming App | Flutter, FastAPI, Gemini API, SQLite

In Progress

- Built a cross-platform music player with playlist management, high-quality audio streaming, and synced LRC lyrics.
- Integrated the Gemini API for AI-powered song recommendations and library matching.
- Designed a FastAPI backend with token-based authentication and SQLite-backed data storage.

MSME Smart Voltage Guardian – IoT Voltage Monitoring Platform | ESP32-C3, PlatformIO

Hackathon Submission, 2025

- Designed an IoT voltage monitoring system with a cloud-connected web dashboard for small manufacturers, submitted to MSME Idea Hackathon 6.0 (Energy Efficiency / Industry 4.0 theme).
- Handled end-to-end hardware interfacing, including sensor wiring and serial communication debugging on real hardware.

Portfolio Website – Personal Site | HTML, CSS, JavaScript

Live

- Designed and built a self-hosted personal portfolio from scratch, including a custom terminal-style loading animation and a working contact form.

Achievements

- MSME Idea Hackathon 6.0 – submitted the MSME Smart Voltage Guardian concept note under the Energy Efficiency / Industry 4.0 theme.
