PROFILE

Second-year B.Tech Information Technology student who enjoys building practical software and exploring how technology works. Interested in artificial intelligence, large language models, autonomous agents, cybersecurity, networking, and self-hosted systems. Hands-on experience with Python, Flutter, FastAPI, Linux, and hardware projects. Currently developing personal projects while learning more about AI-powered tools and agent workflows.

EDUCATION

Velammal Engineering College
B.Tech in Information Technology | 2025 – Present | Second Year

TECHNICAL SKILLS

Programming	Python, Dart, C/C++, JavaScript, HTML, CSS
Frameworks & Backend	Flutter, FastAPI, REST APIs, SQLite
AI & Development	Gemini API, LLM integration, prompt engineering, introductory agent workflows
Systems & Hardware	Linux, Git, GitHub, ESP32-C3, PlatformIO, MQTT, networking fundamentals

SELECTED PROJECTS

KAZE – AI Security Agent

Python • LLM API integration • FastAPI

• Developing a personal AI security-agent project that connects an LLM with a structured application interface.

• Working on the API layer and agent workflow, with an emphasis on making tool-assisted security tasks easier to manage.

Melodista – Music Streaming Application

Flutter • FastAPI • Gemini API • SQLite

• Building a music application with playlist management, audio streaming, and synchronized LRC lyrics.

• Exploring AI-assisted music recommendations and a backend using FastAPI, token-based authentication, and SQLite.

ScamShield – Scam Awareness Project

AI • Application Development

• A project focused on helping users identify and understand potential scams.

• Developing it as part of a broader interest in practical AI applications and digital safety.

AREAS OF INTEREST

Artificial Intelligence and LLMs • Autonomous AI agents • Agent tools such as Hermes and Agent Zero • Cybersecurity • Home-lab setup and self-hosting • Linux and system administration • Networking • Emerging technology
